Education

Manipal Institute of Technology - Bengaluru

2022 - 2026

BTech Computer Science Engineering (Artificial Intelligence)

CGPA: 8.9

Experience

SuperAGI

July 2026 - Present

Software Development Engineer 1

Bengaluru, Karnataka

- Own iOS development of **OK, Food Essentials Delivered** (SwiftUI, iOS 17+), SuperAGI's quick-commerce app with **8,000+ downloads** and **1,000+ daily orders**; 13-module SPM architecture across chat, browsing, and checkout.
- Shipped multi-fulfillment-center commerce: address-driven store resolution, per-store catalogs and pricing, and a checkout price-change reconciliation flow so orders always bill what the user was shown.
- Built a server-driven CMS layout engine (multi-page layouts, TTL caching, graceful fallbacks), letting ops publish app pages without a release.
- Shipped dual-channel realtime (MQTT + SSE) for agent messaging and live order tracking; own the App Store release cycle end-to-end with Razorpay and Stripe payments.

SDE Intern

January 2026 - June 2026

- Built frontend for **Vibe Coder**, SuperAGI's AI app builder that generates full applications from natural-language prompts with real-time live preview.
- Built frontend for **Digital Employees**, AI teammates that autonomously join meetings to run sales demos with voice, avatar, and live slide coordination.
- Collaborated with agent-infrastructure and backend teams on end-to-end integration across multiple AI products on the platform.

SLK Software

June 2025 - August 2025

GenAI Intern

Bangalore, Karnataka

- Developed an AI-powered n8n workflow integrating OpenAI API to interpret natural language queries for dynamic SQL Server data retrieval.
- Automated company data extraction using conversational prompts, streamlining business intelligence access through a chat-based interface.

Application Development Cell (Manipal Institute of Technology)

October 2024 - February 2025

Front End Developer

Bangalore, Karnataka

- Collaborated on the Accreditation System's frontend, implementing responsive design to streamline institutional ranking processes.
- Worked closely with the backend team to integrate APIs, ensuring seamless data flow and functionality.

Projects

Goodlife – Returns & RTO Audit Dashboard | *Freelance Paid Project: Next.js, Supabase, TypeScript*

August 2026

- Contracted by an Amazon India seller (~40k orders/month) to build a production dashboard auditing RTO returns and recovering refunds via SAFE-T claims, replacing a 59-column Excel workflow.
- Designed a Supabase Postgres backend with row-level security and role-based access across 12 branches; automated seller-report ingestion with deadline-tracked claim eligibility.
- Shipped 13-slot photo evidence capture (client-side compression, signed URLs from private storage), iterating directly with the client's ops team.

Seventify - Attendance & Task Management App | *Flutter, Firebase*

Released Feb 2024

- Developed and released a mobile app for college students to track class attendance and manage daily tasks, reaching **250+ downloads** and 100+ active users.
- Utilized Firebase for real-time data synchronization, authentication, and Firestore database management.

Technical Skills

Languages: Swift, Dart, JavaScript, TypeScript, Python, Go, C, Java, HTML, CSS, SQL

Frameworks: SwiftUI, Flutter, React.js, Vue.js, React Native, Next.js, Express.js, Node.js, Flask, OpenCV, Tailwind CSS, Bootstrap

Developer Tools/Technologies: Firebase (Firestore, Auth, Functions, Hosting), Supabase, MongoDB, MySQL, MQTT, Git, GitHub, Postman, Figma, Razorpay/Stripe APIs, Google Cloud Platform (GCP), REST APIs, Docker
